

MERCHANT ANALYTICS LOGIC THINKING FLOWS

■ SCENARIO 1: ORGANIC CHANNEL DOWN

When Organic TPV declines vs previous month:

Step 1: Compare YoY Data

Check if this decline is seasonal by comparing the same period from last year.

Branch 1 - If SEASONAL (YES):

■ This is expected behavior. Monitor next period but no immediate action needed.

Branch 2 - If ABNORMAL (NO - not seasonal):

■ Requires investigation. Proceed to Step 2.

Step 2: Investigate Root Cause

1. **Monitor competitors:** Did a competitor gain market share? Check their pricing, promotions, and website activity.
2. **Check internal campaigns:** Did an internal campaign/promotion end? Review marketing activities from last month.
3. **Review community feedback:** Check social media, user groups, and feedback channels for any negative sentiment or complaints.

Recommended Actions by Root Cause:

- **Competitor gained share:** Analyze their strategy and run counter-campaign with better value proposition
- **Internal campaign ended:** Relaunch campaign or optimize new strategy
- **Negative user feedback:** Fix identified issues/improve UX, then run retention campaign

■ SCENARIO 2: PAID CHANNEL DOWN

When Paid TPV declines vs previous month:

Step 1: Break Down by Voucher

Identify which specific voucher(s) declined. Create a breakdown table with:

- Voucher name (e.g., Voucher A, Voucher B)
- MTD TPV vs Previous Month TPV
- % Change
- Budget allocated vs previous month

Step 2: Analyze Budget Changes

Compare budget allocation for the declining voucher(s):

Case 1 - Budget Cut (↓50%):

■ EXPECTED decline. This is normal. Actions:

- Reassess ROI of this voucher
- If ROI is good, consider re-investing
- If ROI is poor, maintain reduced budget

Case 2 - Budget Unchanged:

■■ QUALITY ISSUE. Decline not due to budget but performance degradation. Actions:

- Test new creative assets
- Optimize targeting parameters
- Review ad placement quality
- A/B test different messaging

Case 3 - Budget Increased (Unexpected):

■ DEMAND ISSUE. Market saturation detected. Actions:

- Check for market saturation/ad fatigue
- Reduce budget allocation
- Switch to alternative voucher with better demand
- Pause and retry with new creative approach

■ SCENARIO 3: QR CODE CHANNEL DOWN

When QR Code channel TPV declines:

■ CRITICAL DIFFERENCE: QR is NOT self-service

Unlike Vi/BNPL with clear voucher/budget structure, QR Code lacks:

- Clear voucher breakdown
- Explicit budget allocation tracking
- Organic vs Paid distinction
- Automated root cause analysis capability

System Process:

Step 1: Alert Triggered

System detects QR decline and generates alert:

"QR Channel Down ↓15% vs Previous Month"

Step 2: Escalate to Business Team

System CANNOT auto-diagnose. Requires human domain knowledge.

Notify: Area Manager / Regional Lead

Include in escalation:

- QR TPV data (MTD vs Previous)
- YoY comparison (seasonal analysis)
- Affected regions/locations (if applicable)
- Request: Root cause investigation + recommendations

Step 3: Business Team Investigation

BIZ team analyzes possible causes:

- Did offline promotion/campaign end?
- Seasonal retail traffic decline?
- Regional macroeconomic factors?
- Competitor activity in QR space?
- Technical issues with QR system?

Step 4: Document Findings

Once BIZ investigation complete:

- Add finding to analytics report
- Include BIZ's recommended action
- Track next period to verify recovery/trend
- Follow up if no improvement

■ SCENARIO 4: GROWTH DETECTED (UP ↑)

When TPV increases vs previous month:

Step 1: Identify Growth Driver

Don't just celebrate - understand the source. Key question:

Is growth from **Organic** or **Paid** or **Both**?

Compare growth rates for each segment. Check timing against:

- Campaign launches
- PR announcements
- Seasonal events
- Competitor activity

PATH A - ORGANIC GROWTH ↑

Possible drivers:

- PR coverage / media mentions
- Viral moment / user-generated campaign
- Competitor outage/decline
- Word-of-mouth / network effect

ORGANIC ACTIONS:

1. Document the specific driver (what caused it?)
2. Can it be amplified? (more PR, social push?)
3. Can it be replicated? (plan next period campaign)
4. Allocate MINIMAL budget (organic has high margin)

PATH B - PAID GROWTH ↑

Possible drivers:

- New high-performing voucher launched
- Ad campaign optimization success
- Seasonal campaign timing sweet spot
- Improved targeting / audience expansion

PAID ACTIONS:

1. Identify which voucher is driving growth
2. Analyze ROI: Is margin > ad spend cost?
3. If unit economics positive: SCALE the budget
4. Monitor for ad fatigue / saturation
5. Test variations to sustain growth

KEY PRINCIPLE:

Growth without understanding driver = high risk of poor scaling decisions.

QUICK DECISION FRAMEWORK

ORGANIC CHANNEL:

Down? → Check YoY → If seasonal: monitor only | If abnormal: investigate competitor/internal/feedback

PAID CHANNEL:

Down? → Break by voucher → Check budget: Cut (expected) | Unchanged (quality issue) | Increased (saturation)

QR CHANNEL:

Down? → Alert BIZ team → Wait for investigation → Document findings

GROWTH (UP):

Identify source: Organic (amplify & replicate) | Paid (analyze ROI & scale if positive)

GOLDEN RULE:

Always correlate metrics with business actions (budget changes, campaigns, competitor moves). Metrics alone don't tell the story—context does.
